Research interests

Object detection and segmentation in remote sensing images (optical and SAR), tiny object detection, detection transformers

Education

B.S. in Computer Engineering, Hanbat National University, Daejeon, Korea · Mar 2023 – present

Research experience

Undergraduate researcher, AIM Lab, Hanbat National University · Advisor: Prof. Haneol Jang · Feb 2024 – present

- Designed and implemented SPOT-DETR, a detector for tiny objects in aerial images (co-first author). It reaches 37.6 AP on AI-TOD and 33.3 AP on AI-TOD-v2, above every detector retrained under the same protocol.
- Proposed YOLO-Dos, a speckle suppression module for SAR ship detection (first author). It raises mAP@50:95 by 5.75 points over YOLOv8 on HRSID.
- Proposed region weights for the eyes, nose and mouth in a ViT deepfake detector (first author). On FaceForensics++ it improves ACER by 7.94% and AUC by about 3% over plain ViT.

Honors and competitions

Grand Prize, 6th AI SPARK Challenge · wildfire detection from multispectral satellite imagery · 2024

15th in the offline final, LG Aimers 9th cohort hackathon · 29th of 1,090 teams online (top 3%) · 2026

6th of 138 teams (top 5%), National Park Satellite Monitoring AI Challenge · coastal debris · 2026

16th of 271 teams (top 6%), SW-Centered University Digital Competition · 2025

85th of 985 teams (top 9%), Wind Power Forecasting AI Competition (BARAM 2026) · 2026

28th of 219 teams (top 13%), SW-Centered University Digital Competition · 2024

2nd place, cloud segmentation Kaggle challenge · Hanbat National University AI course · 2025

Projects

Illegal livestock barn detection · 2026 – in progress

Cloud segmentation in satellite imagery (team lead) · Sep – Dec 2025

- Trained a model that segments thick clouds, thin clouds and cloud shadows; 2nd place with a score of 0.8555. PyTorch.

Face anti-spoofing classification (team lead) · Mar – Jun 2025

- Classified live and spoofed face images with 98.33% accuracy. PyTorch.

Face-recognition smart door lock (team lead) · Sep – Dec 2024

- Retrofit for an existing door lock: on-device face recognition on a Raspberry Pi 4, GPIO lock control, and access logs with photos. Python, OpenCV, SQLite, MQTT.

Skills

Languages Python, C, Java
Deep learning PyTorch, MMDetection, Ultralytics YOLO, timm, OpenCV, MediaPipe, scikit-learn
Infrastructure Linux multi-GPU servers, Docker, Git, Weights & Biases
